Subject: Phase II Environmental Site Assessment Report  
The Improvements of East 14th Street from 162nd Avenue to 172nd Avenue  
Job Number: R32112

Dear Ms. Lo:

In accordance with your request, Ninvo & Moore has prepared this Phase II Environmental Site Assessment (ESA) Report for the Alameda County Public Works Agency, relating to the project area along East 14<sup>th</sup> Street from 162<sup>nd</sup> Avenue to 172<sup>nd</sup> Avenue in Ashland, California. This ESA was conducted based on our Proposal for a Phase II Environmental Site Assessment dated June 27, 2019.

Please contact us at (510) 343-3000 should you have any questions regarding this report.

Respectfully submitted,  
**NINVO & MOORE**

Helen Hild  
Project Geologist

Kris M. Larson, PG 8059  
Principal Environmental Geologist

HEH/KML/gvr

Distribution: (1) Addressee (via e-mail)

B – Laboratory Analytical Report

# **1 INTRODUCTION**

Ninvo & Moore was retained by the Alameda County Public Works Agency (ACPWA) to conduct a Phase II Environmental Site Assessment (Phase II ESA) for the East 14<sup>th</sup> Street Road Improvement Project along East 14<sup>th</sup> Street from approximately 162<sup>nd</sup> Avenue to 172<sup>nd</sup> Avenue in Ashland, California (Site, Figure 1). This Phase II ESA was conducted in accordance with our proposal for a Phase II Environmental Site Assessment dated June 27, 2019 (Proposal).

## **1.1 Site Description**

The Site is located along East 14<sup>th</sup> Street, bounded by 162<sup>nd</sup> Avenue to 172<sup>nd</sup> Avenue, in Ashland, California (Figure 2). The ACPWA will be conducting road improvement work at the Site, which includes sidewalk, road, crosswalk and center median replacement; below ground utility replacements; and the installation of bike lanes and bioswales. Ninvo & Moore calculated up to 2,000 cubic yards of soil will be excavated during these improvement activities. To classify the soil for disposal, Ninvo & Moore recommended the advancement of six borings (B1 through B6) to a maximum depth of 5 feet below ground surface (bgs) in the sidewalk, street and median of East 14<sup>th</sup> Street in our Proposal.

## **1.2 Geology/Hydrogeology**

Based on our Phase II ESA conducted at the Site, the subsurface is composed of heterogeneous fill to approximately 2 feet bgs, and is underlain by primarily sandy silt to poorly-graded sand to a total explored depth of 5 feet bgs. Groundwater was not encountered during this investigation.

# **2 PRE-FIELD ACTIVITIES**

The following activities were performed prior to initiating the Phase II ESA activities.

## **2.1 Review of Historical Environmental Test Results**

The ACPWA provided Ninvo & Moore with Cal Engineering & Geology's (CE&G's) Geotechnical Data Report, summarizing work that was conducted at the Site in July 2018. CE&G conducted coring and deflection testing at 16 locations and collected 8 environmental soil samples along the proposed storm drain location on the eastern side of East 14<sup>th</sup> Street (CE&G, 2019). A review of the environmental samples was not provided in CE&G's report. Ninvo & Moore tabulated these sample analytical results (Table 1 and 2), and the results were within non-hazardous waste criteria per California Code of Regulation Title 22 waste classification guidelines (CCR Title 22).

Ninvo & Moore reviewed the State's Geotracker website to determine if any current or former environmental cases were located in the vicinity of the Site. Ninvo & Moore identified six closed leaking underground storage tank (LUST) cases, one closed cleanup program site, and one open cleanup program site. Boring B2 was advanced in the vicinity of the 16301 and 16335 East 14<sup>th</sup> Street former LUST cases, and boring B5 was placed across the street from the 16690 East 14<sup>th</sup> Street former LUST case.

## 2.2 Health and Safety Plan

Ninvo & Moore prepared a site-specific health and safety plan (SSHSP) for the Site prior to mobilization, which was reviewed with field personnel prior to the start of each day of field work. Field personnel signed the acknowledgement form attached to the SSHSP, indicating they understood and would abide by its provisions.

## 2.3 Utility Location

As required by California law, Ninvo & Moore notified Underground Service Alert (USA) at least 48 hours prior to conducting any ground disturbance activities. Ninvo & Moore personnel marked out the vicinity of the boring locations in white paint and notified USA of the proposed drilling, including location and date. Due to the presence of several subsurface utilities observed along the sidewalks and roadway of East 14<sup>th</sup> Street, Ninvo & Moore marked out seven proposed boring locations as a contingency.

Ninvo & Moore retained Pacific Coast Locators (PCL) of San Leandro, California to scan the vicinity of seven boring locations (B1 through B7) for the presence of subsurface utilities. On July 2, 2019, PCL verified the underground utility markings made by USA and identified the locations of additional utilities that may not have been previously marked. Additionally, Ninvo & Moore reviewed right of way and as-built diagrams provided by ACPWA. No conflicts were encountered with six of the proposed boring locations (B2 through B7).

## 2.4 Permitting

Ninvo & Moore obtained permit W2019-0500 from the ACPWA on July 2, 2019, for the six borings, which is provided in Appendix A.

# 3 FIELD ACTIVITIES

The following section provides a summary of the field activities performed during the Phase II ESA.

### **3.1 Boring Advancement**

Cascade Drilling of Richmond, California (C-57 License No. 938110) advanced six soil borings (B2 through B7) on July 3, 2019. Boring B1 was not advanced, due to utility conflicts. The six borings were cored with a 6-inch concrete corer and advanced with a 2.25-inch hand auger to the following depths:

- Borings B2, B3, B4 and B7 were advanced to 3 feet bgs and
- Borings B5 and B6 were advanced to 3 feet bgs.

#### **3.1.1 Soil Sampling**

One soil sample was collected from each soil boring and transferred into a 16-ounce glass container, placed in a cooler on ice and transported under chain-of-custody (COC) documentation to Torrent Laboratories Inc. (Torrent) in Milpitas, California, a California-certified analytical laboratory. Soil samples were analyzed for the following:

- Total petroleum hydrocarbons (TPH) as diesel (TPHd) and motor oil (TPHmo) using United States Environmental Protection Agency (USEPA) Method 8015B,
- TPH as gasoline (TPHg) and volatile organic compounds (VOCs) using USEPA Method 8260B.
- Organochlorine pesticides (OCPs) using USEPA Method 8081B,
- Polychlorinated biphenyls (PCBs) using USEPA Method 8082A,
- Semi-volatile organic compounds (SVOCs) using USEPA Method 8270C,
- Title 22 Metals using USEPA Method 6010B and 7471B,
- Hexavalent chromium using USEPA Method 7199, and
- Asbestos using California Air Resources Board (CARB) Method 435A.

#### **3.1.2 Investigation-Derived Waste**

Investigation-derived waste (IDW) generated from the Phase II ESA included soil cuttings and construction debris. The IDW was stored in a 55-gallon drum, which was labelled and placed in a secure location on Alameda Flood Control District property pending waste profiling and proper off-Site disposal. The IDW is characterized as non-hazardous waste. The drum is scheduled to be removed on July 24, 2019. A copy of the laboratory report used to characterize the waste is included in Appendix B. Ninyo & Moore will forward the final waste manifest to the ACPWA upon receipt.

## **4 ANALYTICAL RESULTS**

Analytical results are summarized and compared to the San Francisco Bay Regional Water Quality Control Board's (RWQCB's) 2019 Tier 1 and Construction Worker Environmental Screening Levels (ESLs) (RWQCB ESLs, 2019) on Tables 1 and 2. The laboratory analytical report is provided in Appendix B, and the results are discussed below:

### **4.1 TPHs**

TPHd and TPHmo were detected in sample B7-2.0 at concentrations of 5.12 milligrams per kilogram (mg/kg) and 48.3 mg/kg, respectively. These concentrations do not exceed their respective Tier 1 ESLs of 260 mg/kg and 1,600 mg/kg. TPHd and TPHmo were not detected in the other five samples, and no TPHg was detected above the practical quantitative limit (PQL) in the six samples.

### **4.2 OCPs**

One concentration of 4,4-DDT was detected in sample B7-2.0, at 1.5 micrograms per kilogram ( $\mu\text{g}/\text{kg}$ ), which exceeds its Tier 1 ESL of 1.1  $\mu\text{g}/\text{kg}$ , but does not exceed the Construction Worker ESL of 57,000  $\mu\text{g}/\text{kg}$ .

No other OCPs were detected above their respective PQLs during this Phase II ESA.

### **4.3 Title 22 Metals and Hexavalent Chromium**

#### **4.3.1 Total Metals Results**

Concentrations of nine metals (arsenic, barium, chromium, cobalt, copper, lead, nickel, vanadium and zinc) were detected above their respective PQLs in the six samples. No hexavalent chromium was detected in the soil samples collected during this investigation. Concentrations of Title 22 Metals and hexavalent chromium were compared to the Tier 1 ESLs, Construction Worker ESLs and CCR Title 22 and Code of Federal Regulations (CFR) waste classification criteria. Concentrations of arsenic have been compared to the established background concentration in the Bay Area of 11 mg/kg (Duverge, 2011), which has been accepted by the RWQCB.

- Arsenic was detected at concentrations ranging from 3.04 mg/kg to 5.38 mg/kg in the six samples. These concentrations are below the background concentration of 11 mg/kg of arsenic in the Bay Area.

- Chromium was detected at concentrations ranging from 23.0 mg/kg to 206 mg/kg in the six samples. One concentration, 206 mg/kg in sample B7-2.0, exceeds the Tier 1 ESL of 160 mg/kg. There is no established Construction Worker ESL for total chromium.
- Cobalt was detected at concentrations ranging from 6.18 mg/kg to 28.6 mg/kg in the six samples. One concentration, 28.6 mg/kg in sample B7-2.0, exceeds the Tier 1 ESL of 23 mg/kg and the Construction Worker ESL of 28 mg/kg.
- Lead was detected at concentrations ranging from 3.52 mg/kg to 40.7 mg/kg. One concentration, 40.7 mg/kg in sample B2-3.0, exceeds the Tier 1 ESL of 32 mg/kg, but does not exceed the Construction Worker ESL of 160 mg/kg.
- Nickel was detected at concentrations ranging from 24.4 mg/kg to 186 mg/kg in the six samples. One concentration, 186 mg/kg in sample B7-2.0, exceeds the Tier 1 and Construction Worker ESL of 86 mg/kg.
- Vanadium was detected at concentrations ranging from 22.6 mg/kg to 36.4 mg/kg, in the six samples. These concentrations exceed the Tier 1 ESL of 18 mg/kg; however, the concentrations do not exceed the Construction Worker ESL of 470 mg/kg.
- Barium, copper and zinc detections did not exceed Tier 1 or Construction Worker ESLs.

#### **4.3.2 Metals Leachability Results**

Based on the total metals concentrations, leachability analyses were required for some samples to classify the soils for disposal. One concentration of chromium, 206 mg/kg in sample B7-2.0, exceeds the trigger levels of 10 times the CCR Title 22 soluble threshold limit concentration (STLC) of 5.0 milligrams per liter (mg/L) and 20 times the CFR toxicity characteristic leaching procedure (TCLP) of 5.0 mg/L. STLC and TCLP waste extraction tests (WETs) were conducted on the sample, and both results are below the chromium STLC and TCLP criteria of 5.0 mg/L. Thus, the soil is classified as non-hazardous for disposal.

## **4.4 Asbestos, PCBs, VOCs and SVOCs**

No asbestos, PCBs, VOCs or SVOCs were detected above their PQLs during this investigation.

## **5 CONCLUSIONS**

Concentrations of 4,4-DDT, total chromium, cobalt, lead, nickel and vanadium exceed their respective Tier 1 ESLs, and concentrations of cobalt and nickel in one sample, B7-2.0, exceed their respective Construction Worker ESLs. A health and safety plan should be prepared for the East 14<sup>th</sup> Street Road Improvement project to protect worker safety for the excavations in the vicinity of boring location B7. No additional training will be required for Site workers.

Analytical results collected during this sampling event appear consistent with the concentrations observed in the samples collected by CE&G in July 2018.

The chromium concentration in sample B7-2.0 required additional leachability testing, and the resulting STLC and TCLP results are below CCR Title 22 and CFR waste characterization limits. Based on these results, and the other results from this Phase II ESA and data collected by CE&G during 2018, the soil along the alignment should be acceptable for disposal at a Class II non-hazardous waste landfill.

## 6 LIMITATIONS

The environmental services described in this report have been conducted in general accordance with current regulatory guidelines and the standard-of-care exercised by environmental consultants performing similar work in the project area. No warranty, expressed or implied, is made regarding the professional opinions presented in this report. Variations in Site conditions may exist and conditions not observed or described in this report may be encountered during subsequent activities. Please also note that this assessment did not include an evaluation of geotechnical conditions or potential geologic hazards.

Ninyo & Moore's opinions and recommendations regarding environmental conditions, as presented in this report, are based on limited subsurface assessment and chemical analysis. Further assessment of potential adverse environmental impacts from past on-Site and/or nearby use of hazardous materials may be accomplished by a more comprehensive assessment. The samples collected and used for testing, and the observations made, are believed to be representative of the area(s) evaluated; however, conditions can vary significantly between sampling locations. Variations in soil conditions will exist beyond the points explored in this evaluation.

The environmental interpretations and opinions contained in this report are based on the results of laboratory tests and analyses intended to detect the presence and concentration of specific chemical or physical constituents in samples collected from the subject Site. The testing and analyses have been conducted by an independent laboratory which is certified by the State of California to conduct such tests. Ninyo & Moore has no involvement in, or control over, such testing and analysis. Ninyo & Moore, therefore, disclaims responsibility for any inaccuracy in such laboratory results.

Ninyo & Moore's conclusions, recommendations and opinions are based on an analysis of the observed Site conditions. It should be understood that the conditions of a Site could change with time as a result of natural processes or the activities of man at the subject Site or nearby Sites. In addition, changes to the applicable laws, regulations, codes and standards of practice may occur due to government action or the broadening of knowledge. The findings of this report may, therefore, be invalidated over time, in part or in whole, by changes over which Ninyo & Moore has no control.

This document is intended to be used only in its entirety. No portion of the document, by itself, is designed to completely represent any aspect of the project described herein. Ninyo & Moore should be contacted if the reader requires any additional information, or has questions regarding content, interpretations presented, or completeness of this document.

This report is intended exclusively for use by the client. Any use or reuse of the findings, conclusions and/or recommendations of this report by parties other than those noted is undertaken at said parties' sole risk.

## Works Requesting Permits:

Borehole(s) for Investigation-Contamination Study - 6 Boreholes

Driller: Cascade Drilling - Lic #: 938110 - Method: Hand

Work Total: \$265.00

## Specifications

| Permit Number | Issued Dt  | Expire Dt  | # | Hole Diam | Max Depth |
|---------------|------------|------------|---|-----------|-----------|
| W2019-0500    | 07/02/2019 | 10/01/2019 | 6 | 2.00 in.  | 5.00 ft   |

## Specific Work Permit Conditions

1. Backfill bore hole by tremie with cement grout or cement grout/sand mixture. Upper two-three feet replaced in kind or with compacted cuttings. All cuttings remaining or unused shall be containerized and hauled off site. The containers shall be clearly labeled to the ownership of the container and labeled hazardous or non-hazardous.
2. Boreholes shall not be left open for a period of more than 24 hours. All boreholes left open more than 24 hours will need approval from Alameda County Public Works Agency, Water Resources Section. All boreholes shall be backfilled according to permit destruction requirements and all concrete material and asphalt material shall be to Caltrans Spec or County/City Codes. No borehole(s) shall be left in a manner to act as a conduit at any time.
3. Permittee shall assume entire responsibility for all activities and uses under this permit and shall indemnify, defend and save the Alameda County Public Works Agency, its officers, agents, and employees free and harmless from any and all expense, cost, liability in connection with or resulting from the exercise of this Permit including, but not limited to, properly damage, personal injury and wrongful death.
4. Prior to any drilling activities, it shall be the applicant's responsibility to contact and coordinate an Underground Service Alert (USA), obtain encroachment permit(s), excavation permit(s) or any other permits or agreements required for that Federal, State, County or City, and follow all City or County Ordinances. No work shall begin until all the permits and requirements have been approved or obtained. It shall also be the applicants responsibilities to provide to the Cities or to Alameda County an Traffic Safety Plan for any lane closures or detours planned.
5. Applicant shall contact assigned inspector listed on the top of the permit at least five (5) working days prior to starting,

## **Alameda County Public Works Agency - Water Resources Well Permit**

once the permit has been approved. Confirm the scheduled date(s) at least 24 hours prior to drilling.

6. Copy of approved drilling permit must be on site at all times. Failure to present or show proof of the approved permit application on site shall result in a fine of \$500.00.

7. Permit is valid only for the purpose specified herein. No changes in construction procedures, as described on this permit application. Boreholes shall not be converted to monitoring wells, without a permit application process.

---

## APPENDIX B

### Laboratory Analytical Report

Ninyo & Moore  
2020 Challenger Drive, Suite 103  
Alameda, California 94501  
Tel: 510-343-3000  
RE: E.14th St., Ashland, CA

Work Order No.: 1907044 Rev: 2

Dear Helen Hild:

Torrent Laboratory, Inc. received 6 sample(s) on July 08, 2019 for the analyses presented in the following Report.

All data for associated QC met EPA or laboratory specification(s) except where noted in the case narrative.

Torrent Laboratory, Inc. is certified by the State of California, ELAP #1991. If you have any questions regarding these test results, please feel free to contact the Project Management Team at (408)263-5258; ext 204.

A handwritten signature in blue ink that reads "Kathie Evans". The signature is fluid and cursive, with "Kathie" on the left and "Evans" on the right, separated by a small gap.

**Work Order:** 1907044

## CASE NARRATIVE

Unless otherwise indicated in the following narrative, no issues encountered with the receiving, preparation, analysis or reporting of the results associated with this work order.

Unless otherwise indicated in the following narrative, no results have been method and/or field blank corrected.

Reported results relate only to the items/samples tested by the laboratory.

This report shall not be reproduced, except in full, without the written approval of Torrent Analytical, Inc.

Asbestos analysis was sub-contracted to ELAP certified laboratory EMSL. Sub-contract data will follow under a separate cover.

Analytical Comments for method 6010B, 1907044-006A MSD, QC Analytical Preparation ID 1114633, Note: The % recoveries for Nickel and Zinc are outside of laboratory control limits but % RPD is within limits. The associated LCS/LCSD is within both % Recovery and %RPD limits. No corrective action required.

The spikes in the MS/MSD for Chromium are not recoverable. The sample concentration is greater than 4X the spike concentration. No corrective action is required.

Analytical Comments for method 8015B, 1907044-002A MS, QC Analytical Preparation ID 1114620, Note: The % recovery for Diesel is outside of laboratory control limits but % RPD is within limits. The associated LCS/LCSD is within both % Recovery and %RPD limits. No corrective action required.

## REVISIONS

Report revised to include TCLP data. STLC data is pending.

## TCLP

Note: Extraction of 100 g sample/2000 g TCLP Fluid #1 was performed according to Toxicity Characteristic Leaching Procedure (SW-846 1311TCLP) which was rotated in a rotary shaker@ 32 RPM for 18 hours (+/- 2 hours).

Date Prepared: 7/15/19 at 4:45 PM to 7/16/19 at 10:05 AM

Report also revised to include sub-contracted Asbestos data. Sub-contract data appears as an attachment to the Torrent generated report.

Rev. 1 (7/17/19)

Report revised to include STLC data

STLC

Note: Extraction of 50 g sample / 500g 0.2M Sodium Citrate Solution was performed according to wet extraction procedure (WET) which was rotated in a rotary shaker for 48 hours (+/- 4 hours).

Date Prepared: 7/16/19 at 16:45 to 7/18/19 at 12:50

Rev. 2 (7/18/19)

## Laboratory Qualifiers and Definitions

### DEFINITIONS:

|                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     |
|-------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>Accuracy/Bias (% Recovery)</b> - The closeness of agreement between an observed value and an accepted reference value.                                                                                                                                                                                                                                                                                                                                                                                                                                                           |
| <b>Blank (Method/Preparation Blank)</b> -MB/PB - An analyte-free matrix to which all reagents are added in the same volumes/proportions as used in sample processing. The method blank is used to document contamination resulting from the analytical process.                                                                                                                                                                                                                                                                                                                     |
| <b>Duplicate</b> - a field sample and/or laboratory QC sample prepared in duplicate following all of the same processes and procedures used on the original sample (sample duplicate, LCSD, MSD)                                                                                                                                                                                                                                                                                                                                                                                    |
| <b>Laboratory Control Sample (LCS ad LCSD)</b> - A known matrix spiked with compounds representative of the target analyte(s). This is used to document laboratory performance.                                                                                                                                                                                                                                                                                                                                                                                                     |
| <b>Matrix</b> - the component or substrate that contains the analyte of interest (e.g., - groundwater, sediment, soil, waste water, etc)                                                                                                                                                                                                                                                                                                                                                                                                                                            |
| <b>Matrix Spike (MS/MSD)</b> - Client sample spiked with identical concentrations of target analyte (s). The spiking occurs prior to the sample preparation and analysis. They are used to document the precision and bias of a method in a given sample matrix.                                                                                                                                                                                                                                                                                                                    |
| <b>Method Detection Limit (MDL)</b> - the minimum concentration of a substance that can be measured and reported with a 99% confidence that the analyte concentration is greater than zero                                                                                                                                                                                                                                                                                                                                                                                          |
| <b>Practical Quantitation Limit/Reporting Limit/Limit of Quantitation (PQL/RL/LOQ)</b> - a laboratory determined value at 2 to 5 times above the MDL that can be reproduced in a manner that results in a 99% confidence level that the result is both accurate and precise. PQLs/RLs/LODs reflect all preparation factors and/or dilution factors that have been applied to the sample during the preparation and/or analytical processes.                                                                                                                                         |
| <b>Precision (%RPD)</b> - The agreement among a set of replicate/duplicate measurements without regard to known value of the replicates                                                                                                                                                                                                                                                                                                                                                                                                                                             |
| <b>Surrogate (S) or (Surr)</b> - An organic compound which is similar to the target analyte(s) in chemical composition and behavior in the analytical process, but which is not normally found in environmental samples. Surrogates are used in most organic analysis to demonstrate matrix compatibility with the chosen method of analysis                                                                                                                                                                                                                                        |
| <b>Tentatively Identified Compound (TIC)</b> - A compound not contained within the analytical calibration standards but present in the GCMS library of defined compounds. When the library is searched for an unknown compound, it can frequently give a tentative identification to the compound based on retention time and primary and secondary ion match. TICs are reported as estimates and are candidates for further investigation.                                                                                                                                         |
| <b>Units:</b> the unit of measure used to express the reported result - <b>mg/L</b> and <b>mg/Kg</b> (equivalent to PPM - parts per million in <b>liquid</b> and <b>solid</b> ), <b>ug/L</b> and <b>ug/Kg</b> (equivalent to PPB - parts per billion in <b>liquid</b> and <b>solid</b> ), <b>ug/m3</b> , <b>mg/m3</b> , <b>ppbv</b> and <b>ppmv</b> (all units of measure for reporting concentrations in air), % ( equivalent to 10000 ppm or 1,000,000 ppb), <b>ug/Wipe</b> (concentration found on the surface of a single Wipe usually taken over a 100cm <sup>2</sup> surface) |

### LABORATORY QUALIFIERS:

|                                                                                                                                                                                                                                                                |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|
| <b>B</b> - Indicates when the analyte is found in the associated method or preparation blank                                                                                                                                                                   |
| <b>D</b> - Surrogate is not recoverable due to the necessary dilution of the sample                                                                                                                                                                            |
| <b>E</b> - Indicates the reportable value is outside of the calibration range of the instrument but within the linear range of the instrument (unless otherwise noted)<br>Values reported with an E qualifier should be considered as estimated.               |
| <b>H</b> - Indicates that the recommended holding time for the analyte or compound has been exceeded                                                                                                                                                           |
| <b>J</b> - Indicates a value between the method MDL and PQL and that the reported concentration should be considered as estimated rather than quantitative                                                                                                     |
| <b>NA</b> - Not Analyzed                                                                                                                                                                                                                                       |
| <b>N/A</b> - Not Applicable                                                                                                                                                                                                                                    |
| <b>ND</b> - Not Detected at a concentration greater than the PQL/RL or, if reported to the MDL, at greater than the MDL.                                                                                                                                       |
| <b>NR</b> - Not recoverable - a matrix spike concentration is not recoverable due to a concentration within the original sample that is greater than four times the spike concentration added                                                                  |
| <b>R</b> - The % RPD between a duplicate set of samples is outside of the absolute values established by laboratory control charts                                                                                                                             |
| <b>S</b> - Spike recovery is outside of established method and/or laboratory control limits. Further explanation of the use of this qualifier should be included within a case narrative                                                                       |
| <b>X</b> -Used to indicate that a value based on pattern identification is within the pattern range but not typical of the pattern found in standards.<br>Further explanation may or may not be provided within the sample footnote and/or the case narrative. |

## Sample Receipt Checklist

Client Name: Ninyo & Moore

Date and Time Received: 7/8/2019 11:40:00AM

Project Name: E.14th St., Ashland, CA

Received By: Kathie Evans

Work Order No.: 1907044

Physically Logged By: Helena Ueng

Checklist Completed By: Helena Ueng

Carrier Name: FedEx SameDay

### Chain of Custody (COC) Information

|                                                         |                    |
|---------------------------------------------------------|--------------------|
| Chain of custody present?                               | <u>Yes</u>         |
| Chain of custody signed when relinquished and received? | <u>Yes</u>         |
| Chain of custody agrees with sample labels?             | <u>Yes</u>         |
| Custody seals intact on sample bottles?                 | <u>Not Present</u> |

### Sample Receipt Information

|                                                    |                    |
|----------------------------------------------------|--------------------|
| Custody seals intact on shipping container/cooler? | <u>Not Present</u> |
| Shipping Container/Cooler In Good Condition?       | <u>Yes</u>         |
| Samples in proper container/bottle?                | <u>Yes</u>         |
| Samples containers intact?                         | <u>Yes</u>         |
| Sufficient sample volume for indicated test?       | <u>Yes</u>         |

### Sample Preservation and Hold Time (HT) Information

|                                                 |                                |
|-------------------------------------------------|--------------------------------|
| All samples received within holding time?       | <u>Yes</u>                     |
| Container/Temp Blank temperature in compliance? | <u>Yes</u> Temperature: 5.0 °C |
| Water-VOA vials have zero headspace?            | <u>No VOA vials submitted</u>  |
| Water-pH acceptable upon receipt?               | <u>N/A</u>                     |
| pH Checked by: N/A                              | pH Adjusted by: N/A            |

This report relates only to the samples listed above and may not be reproduced except in full, without EMSL's written approval. This report must not be used by the client to claim product certification, approval, or endorsement by NVLAP, NIST, or any agency of the federal government. EMSL is not responsible for sample collection activities or method limitations. Some samples may contain asbestos fibers below the resolution limit of PLM. EMSL recommends that samples reported as none detected or less than the limit of detection undergo additional analysis via TEM. Samples received in good condition unless otherwise noted.

Samples analyzed by EMSL Analytical, Inc San Leandro, CA
